Which language-learning markets should we research next?

tr, de, pl, cs, uk · last 12 months vs the same months a year earlier · data through 2026-09-26

Bottom line

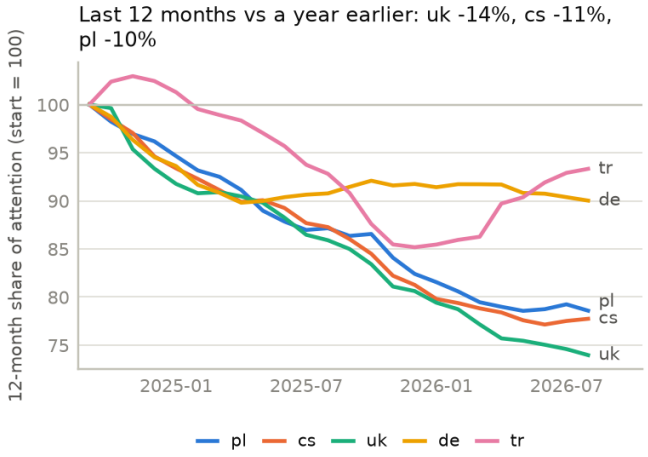

German (23,694 views/month) and Turkish (7,046 views/month) show stable interest, while Polish, Czech, and Ukrainian all decline with high confidence. Research German first—your largest audience with no trend decline. Then validate Turkish as a stable, potentially untapped market.

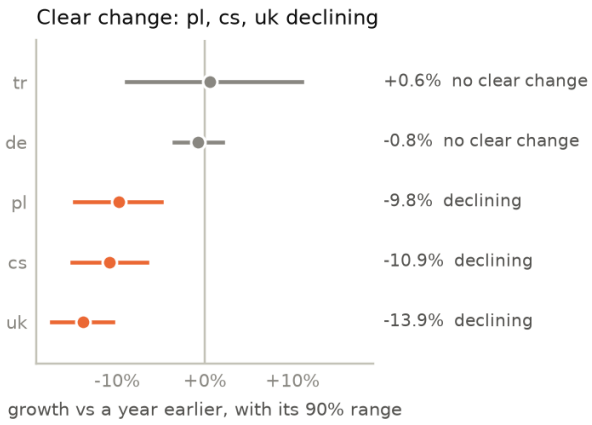

Measured: views of the Wikipedia article on “English” (Q1860) in each edition. It stands in for the question above only as far as that article covers it.

Verdicts by edition

Edition	Article	Views per month	Growth [90% range]	Verdict	Confidence	Segment
tr (Turkish)	İngilizce	7,046	+0.6% [-9.0%, +11.1%]	no clear change	-	large & flat
de (German)	Englische Sprache	23,694	-0.8% [-3.5%, +2.0%]	no clear change	-	large & flat
pl (Polish)	Język angielski	7,913	-9.8% [-14.9%, -5.0%]	declining	high	declining
cs (Czech)	Angličtina	2,947	-10.9% [-15.1%, -6.7%]	declining	high	declining
uk (Ukrainian)	Англійська мова	6,767	-13.9% [-17.5%, -10.5%]	declining	high	declining

tr vs de: 1.4 points apart, no clear difference · tr vs pl: 10.4 points apart, a clear difference · tr vs cs: 11.5 points apart, a clear difference · tr vs uk: 14.5 points apart, a clear difference

What to research next

• Prioritize German**: 3x larger than Turkish, showing flat interest. Study how competitors serve German learners and what features drive engagement.
• Validate Turkish**: Stable 7,046 monthly views. Check whether competitors have thin coverage in this market.
• Investigate Slavic decline**: Polish (-9.8%), Czech (-10.9%), Ukrainian (-13.9%) all falling consistently. Determine if learners shifted to apps or other platforms before investing.
• Monitor scale**: Czech is small (2,947 views/month). Prioritize German and Turkish volume over smaller markets.

Assumptions and limitations

• Pageviews measure attention on Wikipedia, not demand or willingness to pay.
• tr: all of tr Wikipedia changed -16.3% year over year; share-of-edition figures remove this effect
• uk: all of uk Wikipedia changed -24.6% year over year; share-of-edition figures remove this effect
• Wikimedia's daily and monthly edition totals differ slightly in 2025-03, 2026-04 (at most 0.29%); figures here use the daily data
• Wikimedia changed bot detection in 2025 and reclassified Mar-Aug 2025 traffic; share-of-edition figures absorb part of this, since totals were reclassified too
• Interest is the topic articles' share of all human pageviews in that edition (views per million), so edition size and edition-wide trends cancel out.
• Growth compares each month with the same month a year earlier, which cancels seasonality.
